# GO SOLAR!

WHY SHOULD YOU RUN YOUR HOME ON SOLAR POWER?

1. CHOOSE TO POLLUTE THE PLANET LESS

Solar power is a *renewable, clean energy source.* Running your house on an ordinary energy plan uses coal (which is limited in its resources) and other fossil fuels like gas. These fossil fuels release harmful pollutants into the air. Go solar to reduce our overall dependence on fossil fuels and help combat greenhouse gas emissions.

2. RELIABLE POWER SOURCE FOR THE FUTURE

Due to the United States' misuse of sourcing electricity, blackouts and brownouts are a very realistic possibility for the future. The sun is a much more reliable source.

3. REDUCE YOUR ENERGY USE

Going solar is a good step to going green. The less energy you use, the better it is for the environment, and the less your electric bill will cost every year!
