

TAI CHI HOME STUDY 29

FENG SHUI

BACK OUTSIDE WE GO

How to create positive chi flow in the front yard is our next Feng Shui fix. In the front yard we can have driven ways, sidewalks, pathways to the front door, and even plant beds. Not every home is exactly the same either which creates an individuality with the home and the owners. Some homes are left natural and others the exact opposite, here is where we try to find balance. I have seen both in various degrees over the years and I am sure you have too.

All homes are different too as some homes have limits on what your allowed to do with your area because of a condo association, or you're in an apartment complex which also takes care of the outdoor area. All this leads me back to the point that they're all different.

One of the most important things I have learned is that the front area of the outside of your home, just like the inside, should be kept neat and tidy and clean, few examples below.....

1. If you have a rock bed make sure the rocks are swept regularly and kept to the bed, not all over the sidewalks or street.
2. If you have a pathway that leads to the front door keep it clean and free from bramble.
3. Steps to a door and landing should be kept clear and clean
4. Windows of the house kept clean
5. Regular lawn maintenance and weeding
6. Sweep around the water pipes and shutters also to keep cobwebs and bugs under control.

The outside of the home should be attended much like the inside of your home, maybe not as time consuming. The front of the home is where fresh clean air and chi comes into the home, and should bring your joy each time you see it, as well as your family and friends that come over for that front porch visit.

This process can be time consuming but if you keep up with it on a day by day bases it won't be so bad and its good exercise. fresh air, sunshine, and a feeling of accomplishment at the end of the day. What's inside and outside the home is a representation of the inner self.

CHI GONG

1. Loosens Muscles-We will call it "THE SHAKE"
2. Building Power with in
3. Strengthening the internal Organs
4. Relaxes and Slows Respiration or Breath
5. Strengthens Nerves
6. Strengthens Bones and Joints
7. Prevention of joints and injuries
8. Strengthens Ligaments
9. Destroys Free Radicals
10. Increases injury recovery
11. Relieves pent up stress
12. Helps balance emotions
13. Improves circulation
14. Helps with muscle spasms (current)

Chi Gong can help eliminate stress and tightness in the muscle which eventually will lead to uncontrolled muscle spasms. The primary benefit of practicing Chi Gong for this purpose comes by helping us learn how to breathe. With regular practice you will learn to develop a slower more relaxed breath which helps to open up tightened blood pathways in the body.

TODAYS FOCUS IS ON SEASON CHANGE.....

Our Chi Gong studies have now transformed to Summer Time which began on the 20th of June just past. Summer is divided into 2 different seasons, summer and Late Summer, during the 1st half of summer we focus on the Heart and Small Intestines and in Late Summer, what we call Indian summer, the focus is on the Spleen and Stomach.

My teacher, years back, explained how important nature and our environment is when it comes to healing. In spring we face east-ward to bring focus and energy to the liver and gallbladder. In the summer we face south-ward, the direction of the heart and small intestine. During the time we call Indian or late summer we can face a different direction each practice and imagine the earth energy coming up from the ground into the wells of your feet allowing healing chi to the spleen and stomach. During the fall we face west-ward to harmonies the chi healing the lungs and large intestine. In the winter we face north letting the winter chi heal our kidneys and bladder.

Understanding nature (energy movement and directions from our environment) helps us to understand that it is an important facet of healing. We are all part of the natural environment, we grow out of it in the same way, and it affects us in the same way that a wave is effected that emerges from the Ocean or a tree from the ground. While we practice and let nature be a part of our practice it is important that we do not "SPACE OUT" or become preoccupied by internal sensations (which blocks out nature), keep your mind focused on the NOW or the that MOMENT of TIME WE ARE IN. Be like a tree seeking the SUN, feeling the wind blow your branches. Listen to the natural sounds of breathing and your environment.

BE A PART OF - NOT A PART FROM

We are all connected and have our place in the grand scheme of things. Honor all and respect their part, whether it's a squirrel crossing the road, a bird flying or an individual person's right for LIFE. IT ALL MATTERS and is of GREAT IMPORTANCE. Let us never forget, especially at this point in time we all need to care for each other.

Be SAFE

Our Next Study:

1. Reduces Pain
2. Lowers Heart rate and blood pressure
3. Helps breathing disorders
4. Assists immune health
5. Improves balance
6. Improves memory
7. Improves digestion and metabolism
8. Improves kidney health and function
9. Destroys free radicals
10. Helps build internal power
11. Improves quality of sleep

太極

Tai Chi

TAI CHI
WE STAND WE BREATHE

In continuing our season change study today's focus will be on, as mentioned above, what organs we focus on and in Tai Chi what direction we will face. In the first dog days of summer when we practice we should be facing in a Southward direction when we practice lasting approximately 48 days or around the first or second week in August.

PART ONE

1. **Preparation** - This is the opening form done in 3 basic movements **(a.) Bamboo**, Stand straight and tall with your feet about 1 inch apart, we call this a double root. **(b.) Lifting Hands** form is done by slowly lifting or floating your arms up in front of your body then back down. **(c.) The Opening form** begin this form by shifting, or transferring your body's weight into the left leg and begin to step out to the right with your right leg, when you practice this side step movement practice it with your feet first then add the floating or lifting of your arms up in front about shoulder height and floating them back down again.
2. **Ward off Left** ... (a) Shift your weight into the left foot and form an energy ball with the hands keeping the right hand on top and left hand under. (b) Lift the right leg up to turn step toward your 3 o'clock position or T-Step. (c) Shift into your right foot now then lift the left leg up turn stepping back to a T-Step toward 12 o'clock position, **WARD OFF RIGHT**. The hand position through this form is literally unchanged after the energy ball if formed till the very end, this is when we lower the right hand down and keep the left arm upward **COMBING OF THE HORSES MANE FORM, lower the right hand down the inside of the left elbow.**
3. **Grasping of the Birds Tail form** begins here... after the combing of the horses mane form we begin to (a.) shift left to a left root, bring arms toward the left into the **outward ball** form. (b.) Turn step your right leg back to 3 o'clock position than double root. (c.) twist your waist here further to the right bringing your left palm under the right elbow into the **adoring pearls form**. (d.) turn your chest back toward 12 o'clock lowering only the left hand and arm down and back out to the left into the **outward ball** form again, leg position unchanged. (E.) Circle the chest, left hand and arm back toward 3 o'clock ending the form with the left hand sealing into the right. **Grasping of the Birds Tail**.
4. **Roll back and push form** follows the end of Grasping of the Birds Tail form. (a.) sit or shift your weight back into the left hip and leg and at the same time ROLL BACK both your hands toward your throat then down in front of the chest then again forward into a PUSH forward, ending with your weight 50/50 in both your hips, legs and feet. (b.) Sit back again into the left hip (again) just enough to be able to relax and lift the right toes up off the floor then float the right toes inward toward the left toes and at the same time float both hands, palms down float in toward 12 o'clock position. Your foot position here will be an upside down V shape with the feet.
5. **Single Whip**- Single Whip form follows the Roll back and push form as described in lesson 4 above. After the **double rooted** form with both feet in an inward V position we will begin to shift our weight into the right side hip and leg. Form the Crane beak with the right hand then, turn toward the left side slowly lifting only the left heel up while turning left with a gently touch of the ball of the left foot touching the ground. You will be turning from roll back and push at 3

o'clock to the single whip toward 9 o'clock. Remember that every time we turn a foot in to a pigeon type position it's an indication that we will be making a 90 degree turn, doesn't have to be exact. As you turn toward the left open out the right hook and push forward with the left hand. Be careful not to lift the right heel off the floor but **keep both feet rooted down**.

6. **Wide embrace form** (a.) begin to shift your weight into your left leg and begin to lift up your right heel only as you turn your chest back toward 12 O'clock, (b.) slowly bring your right heel inward so now both feet are turning out and heels are inward creating a double rooted V shape with your feet (c.) As your turn back toward 12 o'clock with your chest open the Crain beak hook of your right hand and spread your arms out into the wide embrace form keeping your arms out and your palms forward.
7. **The White Crane Stretching Wings form** involves several different movements and follows the **Wide Embrace form** from the previous form study above: (a.) shift your weight to the right leg around 75 %, and lower both arms down to your side (b.) turn your left heel back to put the foot position into a more neutral foot position. (c.) begin to shift your weight into the left leg and then into a LEFT ROOTED position (remember a rooted position means most of the body's weight is in that leg and the opposite foot is resting by the ankle of that root leg)
8. **Shoulder block to the final White Crain stretching wings form** (a.) Side step with your right foot out to the right side (b.) bring the inside of the left hand to the inside of the right elbow, this is the Shoulder Block Right form, (c.) slowly shift your weight all the way into the right leg and bring the left leg from the left side forward to the front (half round kick) ball of the left foot gently touches the floor here. The arm movement is simply lift the right arm up and lower the left arm down to your left side.

Heavenly Hands or Circling arms

9. (a.) as you continue standing in the same position as White Crane form, begin to circle the arms, circle the right arm that is up down toward the left side and at the same time bring the left arm, that was down, up toward the left side and circle it in to your right.

Here's a few guidelines that may help

- The arms are doing the exact opposite of each other when circling the arms around.
 - If you think of it in the Martial Art Capacity image someone coming toward you from the front to punch you and your arms are going to circle around and around toward your center to try to block the attacker from punching you.
 - Over the years I have used a variety of names for the form, circling arms, heavenly hands and let us not forget Yin and Yang arms.
 - The leg position is the exact same position as the ending of the white crane form and unchanged so for today just focus on the arm movement. Next class we will be over viewing the BRUSH KNEE TURN FORM TO THE LEFT.
10. **BRUSH KNEE TURN LEFT FORM** (a.) as you circle the arms stop the circling as soon as the left palm is over the left side of your body (b.) lift the left knee up and bush your left hand over the raised left knee turning to your left, or turn step, 90 degrees or to your 9 O'clock position (c.) step down with your left leg, after you turn, then shift, or root, into the left leg (for this easy form study we will bring the right foot next to your left ankle) (d) as you root into the left leg your right arm and palm will circle front into a front push form and your left arm will be relaxed down on your left side.

BRUSH KNEE TURN STEP PART 2

11. (a.) step back with the right foot toes first shifting into the right leg, circling arms, just like the previous form, till the left hand is again over the left side, (b.) lift your left knee up again, circling arms as in the first, turn stepping for a second time to your left side, but this time just a little bit more, and touch down the left foot at around 8 o'clock position (c.) shift all your weight into the left leg and balance left, a left root position, right hand again is in a front block and left arms hangs and rests naturally at your left side. (c.) make a soft fist with the right hand and guide your right fist downward to rest inside the left hand on your left side, this form we have referred to as the Sword in Sheath form.
- If you make a fist with you right hand in front of you take your left hand and cover the fist this is the basis of the hand position only it rests by the left hip area.

REFLECT TO INTERCEPT

12. From the Sword and Sheath form we (a.) lift the right leg up opening the right hip and leg to the right toward 12 o'clock (bow turn step), at the same time lift the arms up in front of the head and chest (upper body block) both hands remain in a guarded soft fist position here, as you turn to your right, touch the right foot down toward 12 o'clock then shift your weight equally into both legs (T Step) (double root).

INTERCEPT TO PUNCH

13. (a.) in your double root, arms in an upper body block, begin to lower the right fist only down to the right side (b.) shift your weight into the right leg, you should be facing 12 o'clock position here. (c.) release the left leg and lift it up behind you and circle the leg out to your left side forward toward 12 o'clock (low round kick front) (d.) double root into both legs (e.) punch forward with the right fist.

14. RETREAT AND WIPE OFF

(a.) after the forward punch with the right hand gently open the right palm and turn it up, carrying the arm to your left side, (b.) lift your left palm up to under the right elbow (c.) slowly Guide the right arm down the left open palm floating both arms slowly down, out and overheard like wings (d.) once the arms are over your head cross the wrists, with palms inward, then lower the Crossed Hands down in front of the chest into a form we know as Wu Chi *See image 5 below Cross Hands/Wu chi

PART TWO

CARRY TIGER OVER THE MOUNTAIN

15. From the final form (1st sequence) Wu Chi/Cross Hands (a.) shift your weight into the left leg (left root) and at the same time lower the left arm down and out to the left side, like your holding a large ball on the left side. (b.) lift the right leg up for a 90% turn step to the right to your 3 o'clock position (double root) at the same time bring the left palm to the right palm like your holding a small ball between the palms or sealing the palms together. (This initial movement is like a shorted version of the grasping of the birds tail form)
16. **ROLL BACK AND PUSH-Roll back and push form** follows the holding of the small ball or palms together form above. (a.) sit back or shift your weight back into the left hip and leg and at the same time ROLL BACK both your hands toward your throat then down in front of the chest then again forward into a PUSH forward, ending with 50/50 weight in both hips, legs and feet.
17. **PART ONE of SINGLE WHIP FORM-** (a.) Sit back again into the left hip just enough to be able to relax and lift the right toes up off the floor, keep your heel rooted. (b.) float the right foot and toes inward toward the left foot and toes, at the same time float both hands, palms down, back to the front or left, you should be facing 12 o'clock at this point, your foot position will look like an inverted V. (c.) Begin to shift your weight into the right hip and at the same time lift the left heel up, keep the ball of the left foot here on the floor, and continue to turn to your left now and bring your left heel inward, it will almost move naturally inward as you turn to the left, 9 o'clock position, right hand is in a hook and left hand is under palm up. (d.) lift your right hook up and turn your left palm forward, (e.) lift your left leg up with your knee and step out to 9 o'clock into a T step.
18. **PART TWO of the SINGLE WHIP FORM-** (a.) shift back to the right hip and leg, lifting up the left foot from the floor and turn a little more to your left (8 o'clock) and put the left foot back down, arms remain in the single whip position (b.) shift your weight into the left hip and leg balancing in the left leg here and guide your right foot next to the left ankle. (c.) step forward with the right heel (8 o'clock) keeping the toes up (d.) and turn your entire body, and your right toes inward to the left, pigeon, and double root, in pigeon, like an INVERTED V Arms are still unchanged in the single whip position.
19. **TAI CHI SLAP -** (a.) shift your weight now into your right hip and leg, at the same time lift only the left heel off the floor. As you lift your left heel up during your left turn open the right palm and as you turn toward now begin to slap the right hand to the left toward the underside of 3 o'clock position at the same time lift the left heel up off the floor and pivot through the ball of the left foot into the floor.
20. **REPULSE THE MONKEY BACK FORM - SATURDAY JUNE 6TH HOME STUDY BEGINS HERE:** When we begin the Repulse the monkey our footing is slightly different: the ball of the left foot is forward, with the heel up, and we have 75 percent of our body's weight in our right leg. The arm position is right hand behind the right ear, palm

forward, and the left arm position is held out, parallel to the floor and palm is upward. (a.) lift the left foot up and step back, only a couple inches, arm movements here are left arm back and right arm blocks forward here with each step back the arms are reversed (b.) as you step back with the left foot, toes first, begin to shift your weight into the left leg here releasing the pressure in the right leg. Think of it as a walking backwards, toes first, three times and opposing someone coming at you from the front.

21. **SLANT FLYING** - after the third step back (a.) shift all your weight into the left leg and bring your right foot next to the left ankle, you will be still facing the same position or 3 o'clock position as in repulse the monkey back from above. (b.) the arm position be the left arm up as if holding someone's shoulder like when your dancing and the right arm position would be like wrapping your right arm around your partners waist area. (c.) Side step out to the right with your right foot and as you double root your weight, chest till towards 3 o'clock (d.) bring your left palm toward the inside of the right elbow, combing the left hand down and lifting your right arm up as if blocking someone at your 6 o'clock position. This is the position we know as slant flying. Seeing into the **EYE OF THE TIGER FORM**.
22. **WAVING HANDS LIKE CLOUDS FORM** is done in 3 movements - at this point in the form study we are all facing toward the 3 o'clock position completing the Slant flying form. Waving or moving hands like clouds form is 3 simple side steps to the left, remember feet are also toward 3 o'clock, and at the same time we move the hands almost like were holding a small ball in our hands. The movement can also be related to a slow moving martial art form known as an elbow block form to the left then the right a total of almost 3 times.
 - (a.) Shift our weight to the right leg and side step out to the left with the left foot at the same time block to the left with the left elbow.
 - (b.) shift your weight into the left leg and step inward with the right foot and at the same time block out to the right with the right elbow. As you begin to the block to the right begin to shift your weight back to the right leg repeating the two movements 3 times.
23. **LONG FORM SINGLE WHIP FORM** - Long form single whip is a 3/4 turn to your left.....after our last step inward with the right foot of adoring clouds form we begin first in a double rooted position, with the right hand we pinch the fingers together and keep them pointed down, at the same time we put the left palm up under the right hand. (a.) begin to shift your weight into the left leg and relax the right leg (b.) keeping the hands in the same position unchanged, turn your shoulders to the right which will bring your hands to the right also toward 6 o'clock position, (c.) release the right foot from the floor and lift it up stepping out with right heel first then toes toward 6 o'clock into a double root or T step. (d.) extend both your hands out with keeping the right fingers pinched and left palm up under the right like your holding a mouse from its tail with the right hand, slowly begin to sit back into the left hip and bring only the left hand back toward the center of your chest, lift the right toes up keeping the right heel on the floor, and turn your **CHEST TO THE RIGHT BACK TO 3 o'clock** and at the same time turn your toes inward to the left, inverted V shape with your feet, till your bodies weight is equally distributed into both feet. **ARMS SHOULD REMAIN THE SAME AND JUST GO WITH THE FLOW OF YOUR UPPER BODY AS YOU TURN**. (e.) Shift your weight into the right leg as we're going to keep turning to the right and lifting up the left heel as you continue to turn back toward 12 o'clock. (f.) Lift the left foot off the floor and turn to the left another 1/4 or 90 degrees and step down with the left foot as close to 9 o'clock as you can.
24. **SNAKE CREEPS DOWN FORM (Low Form single whip)** - (a.) Re-shift or balance your weight back into the right leg, lift the left leg and foot up and turn back toward your 12 o'clock position, this will put you back into a T - step with weight equally balanced or double rooted in both legs, your right foot will be pointed toward 3 o'clock and your left foot pointed toward 12 o'clock. (b.) maintaining the double rooted form begin to sit back then down with your hips like your squatting down or sitting in a chair, and at the same time take your left hand which is blocking with the left palm forward, the single whip long form arm position here is exactly the same as we turn with no change, as we squat or sit back we take the left hand and turn the fingers down toward the ground with the palms now inward. (This is the **LOW FORM SINGLE WHIP POSITION**)
25. **GOLDEN ROOSTER STANDS ON LEFT LEG** - (a) standing back upward now begin to shift or balance your weight into the left leg and bring your right arm upward at the same time begin to lift your right knee up, It's almost like your trying to touch your right knee to your right elbow. (b) Then step backward with the left foot, toes first, then begin to shift your weight here into the right leg.
26. **GOLDEN ROOSTER STANDS ON RIGHT LEG** - after your weight is shifted into the right leg begin to lift your left arm up, as if to block an attack from the front and at the same time lift your left leg, knee upward as if you're trying to touch your left knee to your left elbow.

27. PAINTING EYEBROWS IN THE SKY RIGHT-Kick with SOLE RIGHT- (a.) touch back with your left toe behind you and bring your right hand to the inside of the left elbow and karate chimp to the right with your right hand. (b.) begin to shift and turn to your left rooting firmly into the left leg, right foot gently rests next to your left ankle, then bring your hands into a crossed position in front of your chest with your palms inward. (c.) lift your right knee up and open out the knee to your right - lift your crossed arms up above your head and turn your palms outward (d) kick out slowly with the whole foot to your right - and your arms with palms outward move, right palm to the right and left palm to the left, like your painting eyebrows in the sky bringing the left hand down by the left ear and the right arm further down around the right shoulder.

PART THREE

1. BRUSH KNEE TURN STEP TO THE RIGHT
2. PAINTING EYEBROWS TO THE LEFT
3. KICK WITH SOLE TO THE LEFT
4. BRUSH KNEE TURN STEP TO THE LEFT
5. BRUSH KNEE TURN RIGHT
6. BRUSH KNEE TURN LEFT LOW PUNCH
7. TURN TO SWORD IN SHEETH
8. ARMS IN UPPER BODY BLOCK RIGHT ELBOW UP
9. 1/4 TURN RIGHT, RIGHT ELBOW DROPS
10. ADORING PEARLS TO THE RIGHT
11. OUTWARD BALL TO THE LEFT
12. SEAL TO THE RIGHT OR GRASP THE BIRDS TAIL FORM
13. SINGLE WHIP
14. FAIR LADY WORKS THE SHUTTLE FORM - 4 DIRECTIONS
15. SINGLE WHIP
16. FULL FORM GRASP THE BIRDS TAIL FORM
17. THE ENDING BEGINS

A LITTLE BIT OF HISTORY:

Understand that there is not one style or school of QiGong or Tai Chi. As old and ancient as the practice is, it still remains, as it was many moons back, an evolving and personal type of exercise a good comparison for this is "ONE RIVER WITH MANY TRIBUTARIES."

As we continue this new type of practice we should always go back to the basics, which is what I have tried to do these past few weeks during the pandemic. Life, much like in the past, has changed our course for learning to a more personal style, which brings us into a new beginning that will be with us for a very long time. There is an old saying that says "There is always a higher peak to climb" just remember we have to walk down the mountain we already climbed and begin to climb the next.

ACCEPTANCE TO CHANGE = COURAGE

THE COURAGE TO CHANGE = ACCEPTANCE

We have all seen many changes incur so let us together try not to allow these changes to have been made in-vain. Let us together try to understand some of the past lessons left for us from our ancestors then once again learn to move forward.

I hope everyone has a great week

Enjoy the Sun
WE STAND WE BREATHE
